3. I would recommend this global health program / rotation to another medical trainee.
4. Please describe a typical day during your rotation, including details on logistics, housing, hours, commute, dress code, specific challenges, etc...

**ResponseID**  **Response**

930  On clinic days in Palacios (Thursday through Saturday), I woke up around 7:00, put on scrubs and got ready for the day, and ate breakfast. Around 8:00-8:15, I would start to help check in patients (taking vitals). I would then see patients (with another M4 because we had a large group of volunteers) until lunch around 1 or 2 pm. After seeing each patient, we would staff with the attending, order appropriate labs and meds, and write a note (all in Spanish). After lunch, we would see more patients if anyone hadn't been seen yet and follow up on labs and finalize treatment plans for patients who had labs drawn that morning. After clinic concluded around 3:00 pm, we would relax, read, play soccer, or go for a jog. Dinner was usually around 8:30, and I'd go to bed around 11:00 pm.

5. Please describe specific clinical details from your rotation, including information on the department you worked with, guidance from attending physician(s), procedures observed, interaction with patients, etc...
930  
Worked with 3 different attending physicians (depending on the day). Staffed each patient with the attending. Lots of autonomy in proposing what labs to order and medications to prescribe, but still ran everything by the attending. Plenty of time to talk with patients and get to know them and their story. Mostly history taking and examining, didn't observe and specific procedures.

6. If you experienced an ethical challenge during the rotation, please describe the situation, the decision you made, and whether you felt prepared to make an ethical decision.

930  
N/A

7. How will this global health experience contribute towards your personal and professional development?

930  
Great experience getting to know patients and a healthcare system in a different setting, practice Spanish, and learning to diagnose and treat common medical problems in a resource limited setting. All of these skills will be useful to me in practicing urban underserved medicine in the U.S. as well as future global health opportunities.

8. What were some of the strengths and weaknesses of the program / rotation?

930  
Strengths included wonderful clinical staff who made us feel welcome and at home and very nice patients to get to know. There weren't any real weaknesses, but I do wish I had taken time at the beginning of the rotation to shadow the attending to learn how he does things before jumping in and starting to see patients on my own with another medical student volunteer.

9. Any additional comments?
10. Do you grant your permission to share information from this evaluation with other Northwestern students? (Evaluations that are shared online will have student name and all contact information removed...and can only be accessed by an individual with a valid NU Net ID.)

Yes: 100.0% (1 Response)
