I-PACK Education Modules: Advocacy in Action

ANGELA CHUN, MD\textsuperscript{1}, CALLA BROWN, MD\textsuperscript{2}, ANISHA RIMAL, MD\textsuperscript{2}, KRISTIN VAN GENDEREN, MD\textsuperscript{1}

\textsuperscript{1}PEDIATRICS, NORTHWESTERN UNIVERSITY FEINBERG SCHOOL OF MEDICINE; LURIE CHILDREN’S HOSPITAL, \textsuperscript{2}PEDIATRICS, UNIVERSITY OF MINNESOTA
In the US, one in four children (approximately 18.4 million) live in an immigrant family.

Increasing interest in immigrant and refugee health among pediatric educators and trainees.

However, clinicians unsure how to navigate the different levels of advocacy.

I-PACK initiative to develop and implement curricula to equip trainees to positively interact with this vulnerable community.

I-PACK Initiative

- In the US, one in four children (approximately 18.4 million) live in an immigrant family.
- Increasing interest in immigrant and refugee health among pediatric educators and trainees.
- However, clinicians unsure how to navigate the different levels of advocacy.
- I-PACK initiative to develop and implement curricula to equip trainees to positively interact with this vulnerable community.

Learning Objectives

- Identify opportunities for advocacy for immigrant and refugee families at multiple levels including individual, community, and state and federal advocacy.
- Learn how to implement interpreter best practices.
- Create a stakeholder policy map.
- Develop advocacy writing skills including social media, news media, and letter writing to elected officials.

Advocacy at Individual Level

- Case follows a 7 year old patient Miguel and his family who present to clinic for the first time. You recognize that they are speaking to each other in Spanish.
- Limited English Proficiency (LEP)
  - 57 million people (20% of the US population) speak a language other than English at home.
  - Within that cohort 25 million people (8.6% of the US population) have LEP.
  - LEP patients have greater healthcare risks and lower overall quality of care in comparison to English speaking patients.
  - Longer hospital stays.
  - Greater risk of line infections, falls, pressure ulcers, surgical delays, readmissions.
  - Lack of empathy.
  - Greater use of resources.
- Interpreter Best Practices.

Advocacy at Community Level

- What if interpreter practices aren’t available in your practice? Can you identify a systematic barrier?
- Creating a stakeholder map.
  - Defining the issue.
  - Generating Solutions.
  - Developing your ask.

Advocacy at State and Federal Level

- Social Media Advocacy - Twitter activity.
- New Media Advocacy - Op-Ed Writing activity.
- Reaching out to your Representative.
  - To explain to an official how a particular issue affects you, your patients, or your colleagues.
  - To express support for a proposed law, policy, or course of action.
  - To oppose a proposed law, policy, or course of action.

Future Directions

- Accepted as APPD and AAP conference presentations.
- Goal for trainees to take back to home institutions and implement into practice.

I-PACK initiative

- In the US, one in four children (approximately 18.4 million) live in an immigrant family
- Increasing interest in immigrant and refugee health among pediatric educators and trainees
- However, clinicians unsure how to navigate the different levels of advocacy
- I-PACK initiative to develop and implement curricula to equip trainees to positively interact with this vulnerable community
Advocacy in Action Learning Objectives

• Identify opportunities for advocacy for immigrant and refugee families at multiple levels including individual, community, and state and federal advocacy

• Learn how to implement interpreter best practices

• Create a stakeholder policy map

• Develop advocacy writing skills including social media, news media, and letter writing to elected officials
Advocacy at Individual Level

• Miguel is a 7 year old new patient to your clinic presenting for a well child check

• He is triaged into a room with his parents after having his vitals taken by the nurse

• You introduce yourself to the family, but the parents smile and shake their heads to indicate that they do not understand

• You recognize that they are speaking to each other and Miguel in Spanish

• 57 million people (20% of the US population) speak a language other than English at home\(^1,\ 2\), and within that cohort 25 million people (8.6% of the US population) have LEP\(^3\)

• LEP patients have greater healthcare risks and lower overall quality of care in comparison to English speaking patients\(^1,\ 3,\ 4,\ 5\)
  - Longer hospital stays
  - Greater risk of line infections, falls, pressure ulcers, surgical delays, readmissions\(^3\)
  - Lack of empathy\(^6\)
  - Greater use of resources\(^7\)
Interpreter Activity

• For this activity, will need two facilitators (ideally one physician and 1-2 interpreters) and a volunteer from the audience to play the physician

Options for activity:

**Option 1:** Facilitator will recruit 2 interpreters; one to role play as the patient, and the other to role play as the interpreter (ie 2 Spanish interpreters. The facilitator could role-play as the physician or could ask for a volunteer (resident/student) to role-play as the physician.

**Option 2:** Facilitator will recruit an individual (faculty, resident, community volunteer) who speaks a second language and then recruit an interpreter who also speaks that language.

• Pass out physician, interpreter, and parent scripts

• **Scenario 1:** the provider is speaking quickly in English, and using complex jargon. He/she is not pausing between sentences. Not leaving time for “teach back” or questions from family. Interpreter is also having conversations with the family which is not being translated for the provider.
Advocacy at Community Level

• Advocating for best practices when working with interpreters within your hospital system or clinic is an example of **individual advocacy**

• What if interpreter services are not available in your practice setting? What if access is limited?

• How can you advocate for other patients in your **community**?
Creating a Stakeholder Map

• Defining the Issue
• Generating the Solutions
• Developing your asks
Case continued

• You learn that Miguel was born in Venezuela, but recently fled to the United States with his parents due to political turmoil.

• As refugees, what public benefits are Miguel and his family eligible to receive?

• As refugees, what health care benefit options are they eligible to receive?
## Overview of Public Benefits Options for Immigrant Children and Families

Advocacy at State and Federal Level

• Social Media Advocacy—Twitter

• News Media Advocacy—Op-Ed Writing

• Reaching Out to your Representative—Letter writing
  ◦ To explain to an official how a particular issue affects you, your patients, or your colleagues
  ◦ To express support for a proposed law, policy, or course of action
  ◦ To oppose a proposed law, policy, or course of action
Future Directions

• Accepted as APPD and AAP conference presentations
• Goal for trainees to take back to home institutions and implement into practice
• Future Publication
